**EVALUATION**

1. I can describe the risk factors for developing prostate cancer.
   a. strongly agree
   b. agree
   c. neutral
   d. disagree
   e. strongly disagree

2. I can discuss current recommendations for prostate cancer screening.
   a. strongly agree
   b. agree
   c. neutral
   d. disagree
   e. strongly disagree

3. I can explain how treatment recommendations are determined for patients with prostate cancer.
   a. strongly agree
   b. agree
   c. neutral
   d. disagree
   e. strongly disagree

4. The objectives relate to the overall goal of the article.
   a. strongly agree
   b. agree
   c. neutral
   d. disagree
   e. strongly disagree

5. The article is well-written and logically organized, and defines terms adequately.
   a. strongly agree
   b. agree
   c. neutral
   d. disagree
   e. strongly disagree

6. Which of the following risk factors can increase a man’s risk for prostate cancer?
   a. Black race
   b. Age younger than 50
   c. History of testicular cancer
   d. Obesity

7. Which of the following side effects are commonly associated with androgen suppression?
   a. Increased libido and energy
   b. Increased bone density
   c. Alopecia
   d. Hot flashes, decreased libido

8. Which of the following symptoms are produced by early prostate cancer?
   a. Hematuria
   b. Hematospermia
   c. Bone pain
   d. Generally it is asymptomatic

9. Which of the following is the most important factor for prognosis of prostate cancer?
   a. Stage of tumor at diagnosis
   b. PSA level
   c. Patient age
   d. Comorbidities

10. How is the Gleason score determined?
    a. The number of positive core biopsies.
    b. The last 2 PSA results.
    c. The number of years the patient has been symptomatic.
    d. The primary Gleason grade plus the secondary Gleason grade.

**THE LEARNING SCOPE ★ CE Offering ★ 1 Contact Hour**

1. Which one of the following risk factors can increase a man’s risk for prostate cancer?
   - Black race
   - Age younger than 50
   - History of testicular cancer
   - Obesity

2. Which symptoms are produced by early prostate cancer?
   - Hematuria
   - Hematospermia
   - Bone pain
   - Generally it is asymptomatic

3. The American Cancer Society recommends PSA and DRE testing to begin at age 40 for which population?
   - All men with a life expectancy of more than 10 years
   - Only men with high risk factors
   - Black race
   - Age younger than 50

4. Why is the PSA so controversial for prostate cancer screening in the general population?
   - Specificity is poor.
   - Sensitivity is poor.
   - The cost for PSA testing is high.
   - General public?

5. To which drug class does Sipuleucel-T belong?
   - Biologics
   - Chemotherapeutic
   - Androgen suppressor
   - Digital rectal exams diagnose early prostate cancer?

6. What criteria should determine treatment?
   - Recurrence risk, comorbidities, expected survival
   - Provider preference
   - Patient’s age alone
   - Family history of cancer

7. Which of the following side effects are commonly associated with androgen suppression?
   - Increased libido and energy
   - Increased bone density
   - Alopecia
   - Hot flashes, decreased libido

8. Chemotherapy is typically recommended for the patient with which one of the following?
   - Local disease
   - Advanced castration-resistant disease
   - Neutropenia
   - Less than five years of life expectancy

9. Which of the following is the most important factor for prognosis of prostate cancer?
   - Stage of tumor at diagnosis
   - PSA level
   - Patient age
   - Comorbidities

10. How is the Gleason score determined?
    - The number of positive core biopsies.
    - The last 2 PSA results.
    - The number of years the patient has been symptomatic.
    - The primary Gleason grade plus the secondary Gleason grade.
